

Safe handling of polyurethanes

Training obligation for processing Products containing diisocyanates

For the processing of diisocyanates in the industrial and commercial sector, a training obligation was agreed in the context of the REACH ordinance, which is mandatory from 24 August 2023.

Impact for companies and processors

Processors

- must be trained from **24 August 2023** in the safe handling of products containing diisocyanates

Employers

- are responsible for the implementation of this **training obligation** of their **employees**
- Training will be carried out by experts in safety and health protection at the **workplace** or **online**
- The training must be repeated at least **every 5 years**
- The employer documents the successful completion of training

Specialist dealers

- No requirement to prove training when purchasing or selling the products, only when processing
- Forwarding of the information on the training obligation to processors of affected PUR products
- The information regarding the training obligation is printed on the affected products

Training courses (online)

In conjunction with multiple manufacturer and industrial associations, an online training platform was made available via the page www.safeusediisocyanates.eu. You can find further information on isocyanates and training courses, as well as codes for free participation in the online training courses, on the pages of BG BAU, for example. **With regard to the use of our products, we recommend training course 048.**

Affected products from our product range

- PYROSIT® NG fire protection foam
